

- Used to configure the EmpirBus™ system
- Very user friendly but with advanced functions
- Generates a circuit diagram with possibilities to add cable numbers and connections
- Generates easy to understand end user documentation of the installation
- Visual configuration
- Compatible with Windows 98/NT/2000/ME and XP
- Manual included
- Easy to use diagnostic features

## Function

The EmpirBus™ system is configured from a PC via the EmpirBus™ Config software and the EmpirBus™ interface.

Use a visual interface with an image of your installation to connect your consumers to your regular or membrane panel switches.

Advanced diagnostic features included to quickly find the source of a problem.

Print an up to date circuit diagram at any time using the circuit view diagram feature.

Add cable numbers and other notes to the drawings for complete control.

Automatically create user friendly end user documentation that can be delivered with your installation.

The EmpirBus™ Config software can be downloaded from the EmpirBus web site [www.empirbus.com](http://www.empirbus.com).
